Task 04

denom-table function takes table and
check_list as argument. It iterates
over each denomination in the list.
for each denomination it sets a coin
and a tab then it checks over
another iteration whether it's less
than 1 and aif it is then if the coin = 1.
then it updates tab, else it updates
the table by calculation. Or else it
check if the coin is less than j.
in that case it updates given tab
on it finds the minimum. At last
it return the table.
